1. Introduction

Since 1993, CentER annually collects economic data through a panel that consists of two to three thousand households. This survey is called the *CentER Savings Survey* (CSS). The purpose of the research based on the data of the CSS is to study the economic and psychological determinants of the saving behavior of households. This research project was originally part of the VSB-CentER Savings Project. The data are collected through the telepanel of CentERdata (*the CentERpanel*). With this method of data collection, the questionnaires are sent to the respondents by modem, the questionnaires are answered by the respondents on their home computers, and the answers are returned to CentERdata again by modem. The 1999 wave (the seventh wave) of the CentER Savings Survey was conducted over the period May-December 1999.

1.1 Six questionnaires

The CentER Savings Survey of 1999 consists of six questionnaires. Below, we give an overview of the topics that are covered by each of the questionnaires.

1. general information on the household;
2. household and work;
3. accommodation and mortgages;
4. health and income;
5. assets and liabilities;
6. economic and psychological concepts.

All questionnaires were presented to two panels: a representative panel of around 1900 households, and a panel consisting of households taken from the top 10 percent of the income distribution, the so-called high-income panel (which consists of around 650 households). Within each household, all persons aged 16 or over were interviewed. The response rate of each questionnaire is presented in table 1 below. The section General Information on the Household includes *all* members of the household (also those under 16 years of age), and mainly consists of derived variables. The questions from this section are not presented to the respondents but are derived from other variables. For example, the province where the respondent lives is derived from the zip code.

1.2 Eight data sets

The data from the six questionnaires are organized into six data sets (which are SPSS portable files). In addition, two data sets with derived data have been created: the first one includes derived data on (personal) income (see section 1.3 below); the second one includes derived data on assets, liabilities, and mortgages (see section 1.4 below). The names of the eight data sets can be found in the second column of table 1.

Table 1. Response rates of the data sets

	data set	subject	number of persons	number of households
1.	hhi99en.por	general information on the household	3972	1571
2.	wrk99en.por	household and work	2243	1565
3.	hse99en.por	accommodation and mortgages	1512	1511
4.	inc99en.por	health and income	2250	1567
5.	wth99en.por	assets and liabilities	1724	1225
6.	psy99en.por	economic and psychological concepts	1368	979
7.	agi99en.por	aggregated data on income	2250	1567
8.	agw99en.por	aggregated data on assets, liabilities and mortgages	2054	1526

The files can be linked by using two variables: *nohhold* (household index) and *nomem* (index of the member of the household). As *nomem* is always smaller than 100, a unique personal index can be calculated as follows:

$$\textit{nohold} ? 100 + \textit{nomem}$$

Each data file contains a number of variables indicating the time that the questionnaire was filled in. From these variables it is possible to calculate how much time it took the respondent to fill in the questionnaire. Table 2 provides an overview of the variables that can be found at the beginning of each data file.

Table 2. Variables at the beginning of each data file

name of the variable	description
<i>nohhold</i>	household index
<i>nomem</i>	index of the member of the household
<i>month</i>	month of the interview
<i>day</i>	day of the interview
<i>bhour</i>	starting hour of the interview
<i>bmin</i>	starting minute of the interview
<i>ehour</i>	closing hour of the interview
<i>emin</i>	closing minute of the interview
<i>noquest</i>	number of the questionnaire

To distinguish the representative panel from the high-income panel, the variable *panel* has been included in the files. This variable receives value '2' if the observation is part of the high-income panel, and value '1' if the observation is part of the representative panel.

Generally, the following coding has been applied: the answer option 'yes' receives value '1', and the option 'no' receives value '2'. With continuous (and some other) variables the answers 'don't know' and 'unknown' have been coded '-9'.

1.3 Aggregated data on income

The CentER Savings Survey includes many questions about sources of income the respondents may have. On the basis of these sources of income we have calculated the total gross and the total net income on a personal level. Details about the procedure (in SPSS and SAS) that has been applied in the calculations of the 1999 personal income data will be

provided on request. Table 3 includes an overview of the income components that were used to calculate the aggregated data on personal income.

Table 3: Overview of the variables that were used to calculate aggregated data on personal income

Variable	description
NOHHOLD	Household index
NOMEM	Index of member of the household
WINST	Profits [gross]
OG	Real estate income/letting of rooms [gross]
HPREM	Premium for subsidized purchase of house [gross]
BEURS	Scholarship [net]
STUDLEN	Study loan [net]
ALIM	Alimony from spouse [gross]
ALIK	Alimony for children [net]
OTOEL	Parental support for studies [net]
FTOEL	Support from family [net]
RENTE	Interest/dividends/other income [gross]
ERF	Inheritance [net]
ZKP	Premium private medical insurance
HS	Rent subsidy [net]
HG	Allowance to adjust to new rent [net]
HWF	Rateable value of accommodation [gross]
HTR	Mortgage interest payments [gross]
LOON	Pay/salary [gross]
VUT	Early retirement benefits [gross]
WG	Reduced pay [gross]
PENS	Retirement pension/annuity [gross]
WW	Unemployment benefits [gross]
ZW	Sickness benefits [gross]
RWW	Long-term unemployment benefits [gross]
AAW	Disability benefits [gross]
WAO	Disability pension [gross]
IOAW	Benefits for elderly and partly disabled unemployed/self-employed [gross]
ABW	Social assistance (US: welfare)/benefits for self-employed [gross]
AOW	General old-age pension (US: social security payments) [gross]
AWW	General widows' and orphans' pension [gross]
LB	Paid income tax
IB	Calculated income tax
ZFP	Premium national health service/IZA premium
BTOT	Total gross income
NTOT	Total net income

The variables *nohhold* and *nomem* serve to identify the data record. The variables *winst* through *lb* are based on data from the questionnaires Health and Income and Accommodation and Mortgages. With each income component it is indicated whether it concerns a gross or a net income component. With *loon* through *aww* we have in principle used the gross amounts that were provided through the questionnaire Health and Income. If a respondent did not know the gross amount, he/she was asked to provide the net amount. When provided with a net account, we have converted the net amount into a gross amount. If a respondent has more than one employer, the variable *loon* is calculated by adding up the gross amounts of all employers. Total gross income is calculated as follows:

$$btot = loon + vut + pens + zw + wao + ww + wg + aow + aww + abw + rww + aaw + ioaw + alim + \min(winst, 0) + rente + og - htr + hprem + hwf.$$

The total gross income is unknown (has a ‘missing value’) if (in the equation mentioned above) one of the income components from *loon* through *alim* is unknown. If one of the other components (from *winst* through *hwf*) is unknown, we consider this amount to be equal to zero in the calculation of the gross income. Note that negative alimony (paid alimony) is subtracted from the gross income, but that a negative profit (a loss) is not. Income tax *ib* is calculated on the basis of total gross income. Total net income is calculated as follows:

$$ntot = btot - ib + alik + beurs + studlen + otoel + ftoel + erf + hs + hg \\ + \max(0, winst) + \max(alim, 0).$$

Note that for the calculation of the net income, a negative profit (a loss) and negative alimony (paid alimony) are added to the gross income (a negative number is added). Furthermore, looking at the equations mentioned above, we see that the total gross income is not necessarily greater or equal to the total net income. For example, a student who receives only a scholarship or parental support has a gross income equal to zero, while his net income is greater than zero.

The premium for medical insurance is calculated as follows. First we calculate the premium for medical insurance for each income component from *loon* through *aww* (in the first equation mentioned above) separately, then we add them all up.

1.4 Aggregated data on assets, liabilities and mortgages

Introduction

The data of the CentER Savings Survey contain very detailed information on assets, liabilities and mortgages. For some purposes, however, it is more convenient to have aggregated data available. Therefore, we have created a new data set consisting of ‘main’ asset (debt, mortgage) components, where for each of these main components the total amount of money associated with the component was calculated. This has been done on an individual level (not on the household level).

A listing of the main asset, debt and mortgage components can be found in table 4 below. Where in the text below we refer to asset components, this is meant to also refer to debt and mortgage components. We will also speak of ‘subcomponents’. By subcomponents we mean the separate elements that make up the main asset, debt or mortgage component. For example, the subcomponents of the main asset component ‘checking accounts’ include the total number of separate checking accounts a respondent may have.

Construction of new variables

For each main asset component we have constructed the following three variables:

- A. the number of subcomponents of the main asset component reported by the respondent
- B. the total amount of money associated with the main asset component
- C. the *missing value flag*, which indicates the number of *don’t know* answers and *bracketed* answers.

The ‘A’ variable indicates the number of subcomponents that a respondent claims to have. For example, if a respondent claims to have four deposit books, then the ‘A’ variable for the asset component ‘deposit books’ has the value ‘4’. For some main asset components (for example,

the employer-sponsored savings plan) the ‘A’ variable indicates a mere ‘yes’ or ‘no’: a respondent either has an employer-sponsored savings plan (the ‘A’ variable has the value ‘1’) or does not have an employer-sponsored savings plan (the ‘A’ variable has the value ‘0’).

The ‘B’ variable indicates the total amount of money associated with the main asset component. The total amount is computed from the amounts of the subcomponents. If a respondent knows all the amounts of the subcomponents of the main asset component, the computation is straightforward. If a respondent does not know the exact amounts, or does not know the amount at all, the computation of the ‘B’ variable is more complicated. We will explain this below when we discuss the treatment of *don’t know* answers and *bracketed* answers.

The ‘C’ variable indicates the number of times that the respondent does not know the exact amount or does not know the amount at all with respect to a certain asset component. We will refer to the value of the ‘C’ variable as the *missing value flag*. Its exact meaning will be explained below.

The treatment of don’t know answers and bracketed answers

If a respondent doesn’t know the amount of a certain subcomponent, the respondent is asked to select an answer from a series of bracketed answers (e.g. between 0 and 500 guilders, between 500 and 1000 guilders, between 1000 and 2000 guilders, etc.). The last answer in the series of bracketed answers (for example 50,000 guilders or more) is called the *final bracket* answer. If the respondent does not select an answer from the bracketed answers, we consider his answer to be a *don’t know* answer.

If a respondent reports a bracketed answer, we add the middle value of the bracket to the total amount of that main asset component. For example, if a respondent reports ‘between 1000 and 2000 guilders’ we add 1500 guilders to the total amount. In such cases we do not increase the value of the *missing value flag*. In case of a *final bracket* answer (e.g. ‘more than 50,000 guilders’), however, we add the lower bound of the *final bracket* (50,000 guilders) to the total amount, and increase the *missing value flag* by ten.

In the case of a *don’t know* answer we add zero guilders to the total amount of the asset component, and we increase the value of the *missing value flag* by one. For every subcomponent of a main asset component where a *don’t know* answer is recorded, the corresponding *missing value flag* is increased by one. For example, a respondent claims to have four checking accounts. For the first account the respondent gives an amount of 12,131 guilders and for the other three accounts the respondent answers *don’t know*. The total amount for the main asset component “checking accounts” will then be 12,131 guilders, and the *missing value flag* for “checking accounts” has the value 3.

Main asset, debt, and mortgage components

From the questionnaire ‘Assets and liabilities’ we obtain in total twenty-five main asset components (B1 through B25), eight debt components (S1 through S8), and one mortgage component (B19Hy). From the questionnaire ‘Accommodation and mortgages’ we obtain two main asset components (B26Og and B26Og) and two mortgage components (B26Hy and B26Hy).

Table 4 gives an overview of all main components. For each main asset, debt and mortgage component we have constructed the three variables explained earlier (A, B and C). For

example, when we look at ‘deposit books’ (B4), the variable B4A refers to the number of deposit books, the variable B4B refers to the total amount of money associated with the total number of deposit books, and B4C refers to the *missing value flag* for “deposit books”. For the main asset component “checking accounts” (B1), we have introduced two flags: one that refers to positive values (B1C) and one that refers to negative values (B1D).

Table 4. Overview of all main asset, debt and mortgage components

Questionnaire Assets and Liabilities

B1	Checking accounts
B2	Employer-sponsored savings plans (1=Yes, 0=No)
B3	Savings arrangements, linked to a Postbank account
B4	Deposit books
B5	Savings or deposit accounts
B6	Savings certificates
B7	Single-premium annuity insurance policies
B8	Savings or endowment insurance policies
B9	Combined life insurance policies
B10	Pension scheme, not partly paid for by employer (1=Yes, 0=No)
B11	Growth funds
B12	Mutual funds and/or mutual fund accounts
B13	Bonds and/or mortgage bonds
B14	Stocks and shares
B15	Put-options bought (1=Yes, 0=No)
B16	Put-options written (1=Yes, 0=No)
B17	Call-options bought (1=Yes, 0=No)
B18	Call-options written (1=Yes, 0=No)
B19Og	Pieces of real estate, not being used for own accommodation
B19Hy	Mortgages on pieces of real estate, not being used for own accommodation
B20	Cars
B21	Motorbikes
B22	Boats
B23	Caravans
B24	Money lent out to family or friends (1=Yes, 0=No)
B25	Savings or investments not mentioned before
S1	Private loans
S2	Extended lines of credit
S3	Outstanding debts on hire-purchase contracts, debts based on payment by installment and/or equity-based loans
S4	Outstanding debts with mail-order firms, shops or other sorts of retail business
S5	Loans from family or friends
S6	Study loans
S7	Credit card debts (1=Yes, 0=No)
S8	Loans not mentioned before

Questionnaire Accommodation and Mortgages

B26Og	Owner of house (1=Yes, 0=No)
B26Hy	Mortgages on house
B27Og	Owner of a second house (1=Yes, 0=No)
B27Hy	Mortgages on second house

Example

Suppose that for a certain respondent B4A equals 5, B4B equals 65,000 and B4C equals 12. We know that for the main asset component B4 (deposit books) the value of the final bracket is ‘50000 guilders or more’. From the value of B4C we can deduce that one *final bracket* answer was given and that two *don’t know* answers were given. Since B4A equals 5 it follows

that for two deposit books either an exact answer or a non-final bracket answer was reported, adding up to 15,000 guilders.

Please note that in some cases, the aggregated data on the value of residences and mortgages (B26Og t/m B27Hy) are based on data from the 1998 or 1997 wave. The variable HSE_INFO indicates the wave (year) from which the data were taken (see 1.6 below).

1.5 Set-up of the documentation

The set-up of the documentation of the CentER Panel Survey follows the division into the six questionnaires that were mentioned in table 1. Chapters 2 through 7 of this documentation include a description of these questionnaires.

In this documentation, the frequencies of the answers of the respondents have not been included. To compensate for this, the appendices include for each questionnaire a short description of the variables ('descriptive statistics'). In these descriptions, for each variable the number of responses, and the minimum and maximum values have been included.

The data were collected by using the computer program INTERV. Computer-controlled surveys are very flexible. In the documentation we try to present the electronic version as good as possible. As an example, we will look at the question about marital status. The name of the question (variable) is printed to the left, in capitals (*burgst*). After that, the text of the question and the answer options follow. The number before each answer option corresponds with the value of the variable in the data set. Each answer option is followed by the name of the following question to be presented to the respondent (the routing). With answers 1 thru 5, the next question presented to the respondent is *jrbs*. With answer 6, the next question presented to the respondent is either *bezig*, *kk*, or *kidout*, depending on certain conditions.

BURGST

What is your marital status?	
1 married (including separated), having community of property.....	JRBS
2 married (including separated), with a marriage settlement.....	JRBS
3 divorced from spouse.....	JRBS
4 living together with partner (not married).....	JRBS
5 widowed.....	JRBS
6 never married.....	
if not head of the household	BEZIG
if head of the household and GEBJAAR < 1953.....	KK
if head of the household and GEBJAAR >= 1953.....	KIDOUT

In some cases we have introduced an auxiliary variable for routing purposes (indicated as *routing variable*). These routing variables do not appear in the data set, but are only included in the documentation to indicate the routing. Another advantage of computer-controlled surveys is the possibility to do text imputations: depending on earlier answers, a particular phrase may be imputed. For example, question *jrbs* concerns the year that the current marital status was established. Depending on the answer to the (earlier) question concerning marital status, the questions are phrased in a different way. In the documentation, this is presented as follows:

JRBS[if married]

When (which year) did you get married? If you were married more than once, please give the date of the last marriage.....MNDBS
 [if divorced]
 When (which year) did you get your divorce?.....MNDBS
 [if living together with partner (not married)]
 When (which year) did you start living together?.....MNDBS
 [if widowed]
 When (which year) did you become widowed?MNDBS

Another application of text imputation is to include an earlier answer in a later question. For example:

IJ2401 thru IJ2410

Which source did you use to fill in the data on your salary with [EMPLOYER MENTIONED WITH IJ301]?
 1 written annual statementIZ1
 2 other written sourceIZ1
 3 no written sourceIZ1

Variables that are the result of an 'open answer' question (verbal answer) are not included in the data set. However, we do include those questions in the documentation. When '(string)' is printed after the variable name, this indicates that it concerns an 'open answer' question. For example:

RVUT Why did you use the early retirement arrangement?
 1 bad health.....BET
 2 reorganization of company/organization.....BET
 3 other reason.....ARVUT

ARVUT (string)

What other reason was this?.....BET

1.6 Differences between the questionnaires of 1999 and 1998

As opposed to earlier years (waves), in 1999 the questionnaire "accommodation and mortgages" was preceded by two questions, in order to reduce the number of questions to be answered by some respondents. Respondents were first asked whether they had answered the questionnaire "accommodation and mortgages" in earlier years (WOVOOR1), and if they had, they were asked if there had been any changes with respect to their accommodation or mortgages (WOVOOR2) since they last answered the questionnaire. If the respondent indicates that there have not been any changes, he/she is not asked any further questions about accommodation and mortgages. As a result of this change in the questionnaire, we have included an extra variable (HSE_INFO) in the dataset of aggregated data "assets, liabilities and mortgages" (agw99en), which indicates the year of the data that the calculations of the variables B26_Og through B27_Hy are based on (99=1999, 98=1998 and 97=1997). The data of the questionnaire "accommodation and mortgages" (hse99en) have not been adjusted.

The following questions concern paid jobs and pensions. We start with a question that has also been asked in one of the earlier questionnaires. Here, the answering options have been formulated in a slightly different way. On the screen below you will be asked what you consider to be your primary occupation. This concerns the occupation that you spend most of your time on.

Paid jobs are considered to be:

- self-employed (own business/practice, free lance work);
- work in the family business (business of spouse or parents);
- employed on a contractual basis [loondienst];
- sheltered workshop [sociale werkplaats];
- in training at a company or institution, receiving wage or salary;
- trainee/apprentice, receiving wage or salary.

 number of mortgages:.....HYP11

4.2 Mortgages

ANNUITY MORTGAGE: With an annuity mortgage, the total amount of your periodic payments on interest and repayment remains the same (at least) during the period for which the interest rate was fixed. During the first part of this period, the amount due consists of a relatively large part of interest and a relatively small part of repayment. In later years, it is the other way around.

TRADITIONAL LIFE-INSURANCE MORTGAGE: This sort of mortgage consists of a loan and a life-insurance policy. The idea is that there is no repayment, but only paying interest on the loan, and paying a premium for the life-insurance policy. There is no direct relation between the interest rate of the mortgage loan and the savings interest rate of the life-insurance policy (in contrast with an improved life-insurance mortgage, where there is a relation between those two interest rates).

IMPROVED LIFE-INSURANCE MORTGAGE: This is a modernized version of a traditional life-insurance mortgage. An improved life-insurance mortgage consists of a loan and a life-insurance policy. The idea is that there is no repayment, but only paying interest on the loan, and paying a premium for the life-insurance policy. In this case, the interest rate of the mortgage-loan and the savings interest rate of the life-insurance policy are related, which causes monthly net-costs to be rather stable.

LINEAR MORTGAGE: With this sort of mortgage, the periodic payments include paying off a fixed percentage of the total mortgage loan, and paying interest on the loan that is left at that moment. Over

time, the amount you pay on interest becomes less and less, such that total monthly costs go down through the years. In the first period of the term of the mortgage, the costs of a linear mortgage are higher than the costs of an annuity mortgage.

ENDOWMENT MORTGAGE: With an endowment mortgage it is possible, during the term of the mortgage, to get a new loan on (part of) the amount that you have already paid off.

INCOME THROUGH WORK

IJ2 How many employers did you have in 1998? Note: This question concerns paid jobs on a contractual basis. Do NOT include self-employed work (or work in a free profession/free lance work) here. Being the director of a public/private limited company is employment on a contractual basis. If you didn't have an employer in 1998, type 0 (zero).
 number of employers:.....IJ301

Below, questions IJ31 thru IJ243 are presented. These 17 questions were presented to the respondents a maximum of 3 times. So, respondents could mention a maximum of 3 employers for the year 1998. For each employer, a maximum of three periods could be mentioned. The program operates as follows. First, the questions are asked. At that time, the answers are not yet stored in the data. Next, the respondents are shown an overview of their answers and they have the opportunity to correct their answers. The program also includes a number of checks, which e.g. make it impossible for respondents to enter a starting date which is LATER THAN the end date. As soon as the respondents have completed everything and confirmed that it is correct, the data are stored.

INCOME THROUGH PENSIONS

This program operates in the same way as the program in INCOME THROUGH WORK. First, respondents are asked what kinds of income they received (up to a maximum of four kinds), in what periods (up to a maximum of three periods) they received it, and what amounts they received. The answers given by the respondents are shown to them on the screen, and they have the opportunity to correct their answers. As soon as the respondent has confirmed that the information shown on the screen is correct, the data are stored.

The following questions concern the amounts you received through early retirement pension [VUT], general old-age pension [AOW], annuities, and/or other pensions in 1998.

With question IP2., respondents can select more than 1 answer. This is recorded in the data set as follows: instead of one variable IP2., five variables IP20, IP21, IP22, IP23 and IP24 are recorded. The last number in the variable name indicates the answering option that it is about. Each variable can receive either value 1 (the option was selected) or value 2 (the option was not selected). If a respondent for example selects the answering options 1 and 3, variables IP21 and IP23 receive value 1, and variables IP20, IP22 and IP24 receive value 2 (not selected).

IP20 thru IP24

Which of the pension payments mentioned below did you receive in 1998? More than 1 answer is possible here.

This part of the questionnaire concerns assets and liabilities. The following questions concern your own ASSETS.

The following questions will also be presented to other household members aged 16 years or over. To prevent double reporting, JOINT assets should be mentioned by one member of the household only. The member of the household who is responsible for paying bills etc. has been selected to report not only personal assets but also joint assets of the household.

CHECKING ACCOUNTS are private accounts with bank or giro to which, for example, your salary or benefits-payment is transferred, and from which you can make payments. CHECKING ACCOUNTS are sometimes called: giro bank accounts, salary accounts, or private accounts. If you have a checking account that you mainly use for saving, please consider this account to be a SAVINGS ACCOUNT. Savings accounts will be reported later. Do not include checking accounts that you also use for making payments and/or to receive income for your OWN BUSINESS here.

The following questions concern employer-sponsored savings plans.

The SAVE-AS-YOU-EARN DEDUCTION ARRANGEMENT is a kind of employer-sponsored savings plan through which a certain amount of the gross salary is deposited onto a separate savings account. Under certain conditions, the so-saved sum is not subject to income tax and no premiums for social insurance policies have to be paid on it. For each year, a maximum amount (Dfl. 1615 for 1998) can be saved in this (tax-free) way. Also, no money may be withdrawn from this particular savings account for a period of four years. There are a number of exceptions to this (last-mentioned) rule. The money saved through the save-as-you-earn deduction arrangement may for example be used to pay for the premiums for an annuity or for other life-insurance policies.

Through an ARRANGEMENT TO SHARE IN THE COMPANY'S PROFIT the employed are granted extra pay. How much extra pay they get depends on the profit made by the employer. If this extra pay (up to a certain maximum per year: Dfl. 1615 for 1998) is deposited onto a separate account and is not made available to the employed for a period of four years, the so-saved sum is tax free and no social insurance premiums have to be paid on it.

Through the SHARES-OPTION ARRANGEMENT the employer grants the employed the right to buy (option) shares of his own company. The employer may grant the employed an annual benefit of a certain maximum per year (Dfl. 1615 for 1998).

By taking out ANNUITY INSURANCE the insured is entitled to periodic payments, the so-called annuity. The ANNUITY is paid out periodically (for example annually) as of a certain date until the time of death of the insured. PENSION INSURANCE is a specific type of annuity insurance. SINGLE-PREMIUM INSURANCE is also a specific type of annuity insurance, which involves (as the name indicates) a one-time premium. Other types of annuity insurance involve periodical (for example annual) premium payments. Under certain conditions, these premium payments are income tax deductible.

ENDOWMENT INSURANCE is a kind of life-insurance that pays out a lump sum (so, this is not an annuity) to the insured at the maturity of the insurance (or, in some cases, at the time of death of the insured, whichever comes first). The premium payments cannot be deducted from the taxable income, but the lump sum payment is under certain conditions tax free. The life-insurance which is connected to an improved traditional life-insurance mortgage is an example of an endowment insurance. With certain kinds of endowment insurance policies, the insured can decide upon the way his premium payments will be invested (for example in deposits, shares, or bonds).

With premium savings schemes part of the NET SALARY of the employed is withheld and saved. The employer stimulates this by adding a premium (a bonus) to the so-saved sum. The premium granted by the employer may vary between 0% and 100% of the sum saved by the employed. This premium granted by the employer is tax free and no social insurance premiums have to be paid on it if the total sum saved is frozen for four years and if the premium granted by the employer does not exceed a certain maximum per year (Dfl. 1670 in 1998).

By taking out ANNUITY INSURANCE the insured is entitled to periodic payments, the so-called annuity. The ANNUITY is paid out periodically (for example annually) as of a certain date until the time of death of the insured. PENSION INSURANCE is a specific type of annuity insurance. SINGLE-PREMIUM INSURANCE is also a specific type of annuity insurance, which involves (as the name indicates) a one-time premium. Other types of annuity insurance involve periodical (for example annual) premium payments. Under certain conditions, these premium payments are income tax deductible.

ENDOWMENT INSURANCE is a kind of life-insurance that pays out a lump sum (so, this is not an annuity) to the insured at the maturity of the insurance (or, in some cases, at the time of death of the insured, whichever comes first). The premium payments cannot be deducted from the taxable income, but the lump sum payment is under certain conditions tax free. The life-insurance which is connected to an improved traditional life-insurance mortgage is an example of an endowment insurance. With certain kinds of endowment insurance policies, the insured can decide upon the way his premium payments will be invested (for example in deposits, shares, or bonds).

BZ8

Did you, on 31 December 1998, have one or more ENDOWMENT INSURANCE POLICIES that were still in effect? Do not include life-insurance policies connected to an (improved) traditional life-insurance mortgage here. These will be reported later.

MUTUAL FUNDS are created by institutions that invest money from individual savers in joint programs. Thus it is possible, even with small investments, to take advantage of the joint investments (especially by spreading the investments). There are all kinds of mutual funds. The most common are 'shares-funds', 'bonds-funds', and 'click-funds'. You can participate in a mutual fund through a MUTUAL FUND ACCOUNT.

By buying a CALL-OPTION, you acquire the right (not the obligation) to buy shares (or other stocks) at an agreed price during a limited period. By writing a call-option you grant the other party (the buyer of the option) the right to buy. The writer of the option receives a premium in return. Falcons and warrants are comparable to call-options.

The following questions are repeated for each mortgage.

The variables below concern the mortgages respondents may have on their pieces of real estate. For each piece of real estate a maximum of 5 mortgages could be recorded. The variable names all end in three digits. The first digit in each variable name indicates the number of the question, the second digit indicates the number of the piece of real estate (1st thru 5th), and the third digit indicates the number of the mortgage (1st thru 5th); e.g. variable O123 records the answer of the respondent to the first question, about the third mortgage on his second piece of real estate.

ANNUITY MORTGAGE: With an annuity mortgage, the total amount of your periodic payments on interest and repayment remains the same (at least) during the period for which the interest rate was fixed. During the first part of this period, the amount due consists of a relatively large part of interest and a relatively small part of repayment. In later years, it is the other way around.

LINEAR MORTGAGE: With this sort of mortgage, the periodic payments include paying off a fixed percentage of the total mortgage loan, and paying interest on the loan that is left at that moment. Over time, the amount you pay on interest becomes less and less, such that total monthly costs go down through the years. In the first period of the term of the mortgage, the costs of a linear mortgage are higher compared with the costs of an annuity mortgage.

TRADITIONAL LIFE-INSURANCE MORTGAGE: This sort of mortgage consists of a loan and a life-insurance policy. In principle, there is no repayment during the term of the mortgage. You only pay interest on the loan, and you pay for a premium for the life-insurance policy. There is no direct relation between the interest rate of the mortgage loan and the savings interest rate of the life-insurance policy (in contrast with an improved traditional life-insurance mortgage, where there is a relation between those two interest rates).

IMPROVED TRADITIONAL LIFE-INSURANCE MORTGAGE: This is a modernized version of a traditional life-insurance mortgage. An improved life-insurance mortgage consists of a loan and a life-insurance policy. The idea is that there is no repayment. You only pay interest on the loan, and you pay for a premium for the life-insurance policy. At the moment that you take out the improved life-

insurance mortgage, it is guaranteed that at the end of the term you will have saved exactly the amount needed to pay off the mortgage.

INVESTMENT MORTGAGE: This is a new version of the (traditional) life-insurance mortgage. As with other life-insurance mortgages, with most investment mortgages the mortgage loan is paid off at the maturity of the mortgage by a payment from a 'connected' life-insurance. The difference with traditional or improved life-insurance mortgage is that in the case of investment mortgage, the payment of the life-insurance is based on investments.

MORTGAGE WITH ANNUITY: In this case, the mortgage is combined with an annuity insurance. There is no obligation to use the annuity insurance to pay off the mortgage at the maturity of the insurance. The annuity insurance may be used as a supplementary pension insurance.

'NO-REPAYMENT MORTGAGE': With this kind of mortgage you only pay interest during the term of the mortgage. There is no repayment.

'LIFE-TIME' MORTGAGE WITH LIFE-INSURANCE: This is a version of the 'no-repayment mortgage'. The mortgage does not have a maturity date. To make sure that the loan will be paid off no later than the time of death of the person who has taken out the mortgage, a life-insurance is connected to the mortgage.

ENDOWMENT MORTGAGE: With an endowment mortgage it is possible, during the term of the mortgage, to get a new loan on (part of) the amount that you have already paid off.

6.2 Liabilities

The following questions concern your own LIABILITIES.

The following questions will also be presented to other household members aged 16 years or over. To prevent double reporting, JOINT liabilities should be mentioned by one member of the household only. The member of the household who is responsible for paying bills etc. has been selected to report not only personal liabilities but also joint liabilities of the household.

The following questions concern your (outstanding) debts and liabilities. The questionnaire includes the following sections:

- private loans;
- extended lines of credit;
- outstanding debts with mail-order firms;
- loans from family or friends;
- study loans;
- debts ('to be in the red') thru credit cards;
- other loans.

This part of the questionnaire does NOT concern mortgages or being in the red on a checking account.

What is the maximum credit of your [1st thru 10th] extended line of credit?
 any answerFINA1

DEBT BASED ON PAYMENT BY INSTALLMENT: With debts based on payment by installment you do not receive any money, but just the object you bought. The object is your property from the moment you make the deal. You pay a monthly amount on interest and repayment. This sort of credit is common with mail-order firms, for example.

OUTSTANDING DEBT FROM A HIRE-PURCHASE CONTRACT: The situation is the same as with a debt based on payment by installment, with one difference: with hire-purchase the object only becomes your property after the whole sum has been paid off. This sort of arrangement is common with cardealers and audio-visual equipment shops.

EQUITY-BASED LOAN: With this sort of debt, (the paid-off) part of a house (or, e.g., stocks) is given in pledge. The interest rate is usually the same as the mortgage interest rate.

TOEK03

I am only concerned about the present, because I trust that things will work themselves out in the future.

- TOEK04
- TOEK04 With everything I do, I am only concerned about the immediate consequences (say a period of a couple of days or weeks). TOEK05
- TOEK05 Whether something is convenient for me or not, to a large extent determines the decisions that I take or the actions that I undertake. TOEK06
- TOEK06 I am ready to sacrifice my well-being in the present to achieve certain results in the future. TOEK07
- TOEK07 I think it is important to take warnings about negative consequences of my acts seriously, even if these negative consequences would only occur in the distant future..... TOEK08
- TOEK08 I think it is more important to work on things that have important consequences in the future, than to work on things that have immediate but less important consequences. TOEK09
- TOEK09 In general, I ignore warnings about future problems because I think these problems will be solved before they get critical. TOEK10
- TOEK10 I think there is no need to sacrifice things now for problems that lie in the future, because it will always be possible to solve these future problems later. TOEK11
- TOEK11 I only respond to urgent problems, trusting that problems that come up later can be solved in a later stage.TIJD1N
